## Java Spring Engineer

### Description

**Excel Nearshore** is looking for a **Java Spring Engineer** who will be part of our client's technology team, developing features, analyzing and resolving issues, refactoring code, and maintaining the capabilities of our highly scalable multi-tenant healthcare technology platform. As an individual contributor, you will collaborate with other members of your cross functional team, learn technologies and techniques, and produce high quality software. You will maintain and extend the capabilities of the client's healthcare technology platform and products. This is a fully remote and full-time position from Costa Rica, in payroll with benefits.

### Responsibilities

- Collaborates, as part of the development team, to create technical solutions for our software products.
- Own troubleshooting, and fixing integration support issues in Production and during Implementation
- Optimize, refactor, enhance, debug, and troubleshoot existing code.
- Follow all client best practices and coding standards.
- Perform root cause analysis and propose effective solutions for bugs in the software.
- Document, Maintain, and Own technical artifacts, internal knowledge base, best practices, and templates for all integrations, bringing in industry knowledge as appropriate to improve the client's solutions.
- Ensure the best possible performance, quality, and responsiveness of the applications.
- Ensure the best possible performance, quality, and responsiveness of the applications
- Understand specifications and requirements for the development/enhancements of interfaces and other types of data exchange, including but not limited to HIE standards and client interfaces.
- Writes, reviews, and debugs basic programming assignments that are well defined and include mostly debug issues.
- Protects the integrity of code: creating, submitting and utilizing tests.
- Provides transparency of work to the company.
- Transfers knowledge within the department and to other technical teams.
- Given a high-level design, you can code, implement and test a feature.
- Able to take a complex task and break it down into smaller pieces.

### Qualifications

#### Competencies:

- Strong communication skills.
- Self-starter, able to work independently, able to succeed in a fast-paced agile environment.
- Strong organizational skills and ability to manage multiple simultaneous engagements.
- Strong problem solving and analytical skills with experience to troubleshoot and to resolve problems.
